

PAINT

## **Paint Color & Maintenance**

### **Wall & Ceiling:**

**Manufacturer: Rodda**

**Color: Master Painter Satin ES05E1501**

**Sheen: Satin**

### **Maintenance per Manufacturer:**

Allow any new painted substrate to cure for a minimum of 30 days. After that, most dust, dirt or grease marks can be removed using a mild household detergent combined with lukewarm water and gently scrubbed with any soft towel or rag. Touch-up paint can be purchased at any Rodda Paint store with reference to the correct product and color originally applied. Remember that slight variances in color may happen between different batch #'s of the same product making repainting from corner to corner necessary.
